Sun, 08 Jul 2018 16:30:00 GMT - Identifying so-called speciation genes that cause reproductive isolation is a central goal in evolutionary biology. Postzygotic reproductive isolation (PRI), embodied by hybrid sterility, inviability, or weakness, drives speciation and maintains species identity by restricting gene flow between populations (1, 2).

A selfish genetic element confers non-Mendelian ... -

Mon, 09 Jul 2018 01:48:00 GMT - In biology, a gene is a sequence of DNA or RNA that codes for a molecule that has a function. During gene expression, the DNA is first copied into RNA.The RNA can be directly functional or be the intermediate template for a protein that performs a function.
