Tue, 14 Aug 2018 16:51:00 GMT - In fluid dynamics, turbulence or turbulent flow is any pattern of fluid motion characterized by chaotic changes in pressure and flow velocity. It is in contrast to a laminar flow regime, which occurs when a fluid flows in parallel layers, with no disruption between those layers. Turbulence is commonly observed in everyday phenomena such as surf, fast flowing rivers, billowing storm clouds, or ...

Mon, 30 Jul 2018 13:19:00 GMT - Wake turbulence is a disturbance in the atmosphere that forms behind an aircraft as it passes through the air. It includes various components, the most important of which are wingtip vortices and jetwash. Jetwash refers simply to the rapidly moving gases expelled from a jet engine; it is extremely turbulent, but of short duration.

Tue, 14 Aug 2018 23:32:00 GMT - La turbulence désigne l'état de l'écoulement d'un fluide, liquide ou gaz, dans lequel la vitesse présente en tout point un caractÃ"re tourbillonnaire : tourbillons dont la taille, la localisation et l'orientation varient constamment. Les écoulements turbulents se caractérisent donc par une apparence trÃ"s désordonnée, un comportement difficilement prévisible et l'existence de ...

- Static The O-ring is fitted into a machined groove between the two halves of the union. When the halves are drawn together the O-ring compresses to an ovalized cross-section, forming a positive, resilient seal which serves to block the fluid, thus sealing even at low or no pressure.
