Tue, 10 Jul 2018 00:07:00 GMT - Crystals are commonly recognized by their shape, consisting of flat faces with sharp angles. These shape characteristics are not necessary for a crystal—a crystal is scientifically defined by its microscopic atomic arrangement, not its macroscopic shape—but the characteristic macroscopic shape is often present and easy to see.

Sun, 08 Jul 2018 10:39:00 GMT - Crystals have always been rather appealing to me. There is something special about what they are, what they represent. They are more concentrated than regular rocks, they have more crystalline geometric patterns in their atomic structure than the cells in the human body do (sure, it may not be as fluid and moving, but that's yin and yang for you)

- THE DIFFERENCE BETWEEN ROCKS & MINERALS It is not easy to tell the difference between rocks &

minerals because there are so many kinds of them. It takes years of study to be able to accurately identify a mystery rock and even then rockhounds want to know where the specimen came from.
